Get Latest Dated File Path

Description

Finds the latest dated file for a file-name prefix.

Usage

```
resolve_latest_dated_file_path(file_name_base, path_directory, file_extension)
```

Arguments

`file_name_base`	A single non-empty character string giving the file prefix, without the date suffix or extension.
`path_directory`	A single character string giving the directory to search.
`file_extension`	A single non-empty character string giving the extension without a leading dot.

Details

Matching files must follow the project convention '<file_name_base>_YYYY-MM-DD*.<file_extension>'. ISO dates sort lexicographically, so sorting matching paths selects the latest file.

Value

A single character string with the full path to the latest matching file.
