Run Predictive Decomposition Diagnostic Folds

Description

Fits full and reduced models for one diagnostic route and returns fold-level held-out metrics and convergence diagnostics.

Usage

```
run_decomposition_diagnostic_folds(
  route = NULL,
  inputs = NULL,
  cv_indices = NULL,
  fit_config = base::list(),
  fit_fn = fit_jsdm_model,
  predict_fn = stats::predict,
  convergence_fn = diagnose_jsdm_convergence,
  verbose = TRUE
)
```

Arguments

`route`	One-row route data frame or named list.
`inputs`	List returned by 'load_decomposition_diagnostic_inputs()'.
`cv_indices`	Repeated fold test-index list from 'build_repeated_diagnostic_fold_indices()'.
`fit_config`	Optional list of fitting overrides.
`fit_fn`	Model fitting function. Defaults to 'fit_jsdm_model()'.
`predict_fn`	Prediction function. Defaults to 'stats::predict()'.

`convergence_fn` Convergence function. Defaults to 'diagnose_jsdm_convergence()'.

`verbose` Logical. If 'TRUE', progress messages are printed.

Value

Tibble with one row per route, repeat, fold, and variant.
