Run a Pipeline Interpolation Prebuild

Description

Prebuilds interpolation branches with the configured preprocessing workers without invalidating completed target metadata. The active R library paths are supplied to target definitions so parallel workers can resolve packages from the project library reliably.

Usage

```
run_pipeline_interpolation_prebuild(pipeline_script, pipeline_store, workers)
```

Arguments

`pipeline_script`	Path to the selected targets pipeline script.
`pipeline_store`	Path to the selected targets store.
`workers`	Positive integer number of preprocessing workers.

Value

'NULL', invisibly. The function is called for targets side effects.
