Select Top Taxa by Group Occurrence

Description

Selects the most frequently occurring taxa according to the number of distinct groups in which each taxon occurs.

Usage

```
select_top_taxa_by_group_occurrence(
  data_community = NULL,
  maximum_taxon_count = Inf,
  grouping_column_name = "dataset_name"
)
```

Arguments

`data_community`	A community data frame containing 'taxon' and the column named by 'grouping_column_name'.
`maximum_taxon_count`	A positive numeric scalar giving the maximum number of taxa to retain. Defaults to 'Inf'.
`grouping_column_name`	A character scalar naming the column used to count distinct occurrences. Defaults to '"dataset_name"'.

Details

Taxa are ranked by their number of distinct 'grouping_column_name' values, with taxon name used to break ties.

Value

The input community data restricted to the selected taxa.
