Summarize Matched-Fold sjSDM Decomposition Effects

Description

Aggregates paired component-removal effects using taxon means within folds and fold means within repeats for all and eligible taxa.

Usage

```
summarise_sjsdm_decomposition_effects(data_comparisons = NULL)
```

Arguments

`data_comparisons`	Output from [compute_sjsdm_decomposition_fold_effects()].

Details

Only pairs with status "'ok'" and finite raw effects are summarized. Negative component effects remain negative at every aggregation level.

Value

A named list containing fold effects, repeat effects, and descriptive repeat summaries with 95 percent quantile intervals.

Examples

```
## Not run:

summarise_sjsdm_decomposition_effects(data_comparisons)

## End(Not run)
```
