Summarise sjSDM Metric Repeats

Description

Summarises the distribution of repeat-level source estimates and paired improvements returned by [summarise_sjsdm_fold_metrics()].

Usage

```
summarise_sjsdm_metric_repeats(list_fold_metric_summaries = NULL)
```

Arguments

`list_fold_metric_summaries`	Named list returned by [summarise_sjsdm_fold_metrics()].

Details

The 95 percent bounds are the 2.5th and 97.5th percentiles of repeat-level estimates. They describe stability across the supplied repeated splits and are not population-level confidence intervals.

Value

Named list containing 'data_source_repeat_distributions' and 'data_paired_repeat_distributions'. Each table reports the mean, median, standard deviation, empirical 95 percent repeat interval, repeat counts, and fold-taxon coverage across repeats. Paired output also reports the proportion of evaluable repeats with positive model improvement.

Examples

```
## Not run:

summarise_sjsdm_metric_repeats(

  list_fold_metric_summaries = list_fold_metric_summaries

)

## End(Not run)
```
