Summarise sjSDM Tuning Execution

Description

Records the shared tuning strategy, executed fit count, prepared-fold count, and selected-candidate refits avoided through probability reuse.

Usage

```
summarise_sjsdm_tuning_execution(
  data_tuning = NULL,
  data_schedule = NULL,
  data_work_items = NULL
)
```

Arguments

`data_tuning`	Fold-level tuning table from [run_sjsdm_tuning_candidates()].
`data_schedule`	Validated schedule from [build_sjsdm_tuning_schedule()].
`data_work_items`	Optional work-item table from [build_sjsdm_tuning_work_items()].

Value

One-row execution-provenance tibble containing strategy identifiers, fit counts, prediction source, and fit-reduction fraction relative to the former unconditional selected-candidate refit path.

Examples

```
## Not run:
summarise_sjsdm_tuning_execution(
  data_tuning = data_sjsdm_tuning_candidates,
  data_schedule = data_sjsdm_tuning_schedule
)
```

```
## End(Not run)
```
