Assert Prediction Probabilities

Description

Validates that a prediction matrix or data frame contains finite probability-scale values bounded by zero and one.

Usage

```
validate_prediction_probabilities(data_predictions, tolerance = 1e-08)
```

Arguments

`data_predictions`	Numeric matrix or data frame of predicted probabilities.
`tolerance`	Numeric scalar tolerance for small floating-point excursions beyond zero and one.

Value

The input 'data_predictions', unchanged.

Examples

```
validate_prediction_probabilities(
  data_predictions = matrix(c(0.1, 0.9), nrow = 1)
)
```
