load_sjsdm_cv_payload_field
Load an sjSDM CV Payload Field

Description

Reads and validates one canonical v2 artifact before falling back to one documented frozen v1 target. The source store is never modified.

Usage

```
load_sjsdm_cv_payload_field(  
  store_path = NULL,  
  v2_target_name = NULL,  
  artifact_type = NULL,  
  payload_name = NULL,  
  v1_target_name = NULL,  
  read_target_function = targets::tar_read_raw  
)
```

Arguments

store_path Targets store path.
v2_target_name Canonical v2 target name.
artifact_type Expected v2 artifact type.
payload_name Payload field to return.
v1_target_name Frozen v1 fallback target name.
read_target_function Injectable target reader.

Value

The requested v2 payload field or validated v1 target value.
