reshape_community_to_long

Reshape Community Data to Long Format

Description

Reshapes wide community counts to one taxon observation per row.

Usage

```
reshape_community_to_long(data_community = NULL)
```

Arguments

`data_community` A wide data frame containing 'dataset_name', 'sample_name', and at least one taxon-count column.

Details

Missing taxon counts are omitted from the returned long data.

Value

A data frame in long format with columns 'dataset_name', 'sample_name', 'taxon', and 'pollen_count'.

Examples

```
data_community <-  
  tibble::tibble(  
    dataset_name = "example",  
    sample_name = "sample_1",  
    Pinus = 10,  
    Betula = 5  
  )
```

```
reshape_community_to_long(data_community = data_community)
```
